1. Summary: goals & achievements 2012

In all factories, we have a mutual understanding about the way we work together and the way we want to achieve a continuous improvement of labour circumstances.

There have been no audits in 2012 since we have had full audits in 2011 in our factories. In February 2013 there was a MSA in Goirle. The continuation for improvement of transparency has been a focus point. In 2012 we set up a simple system for transparency for all involved in follow up of the audits. We wanted to create a platform this only succeeded partially.

We started in 2010 with an questionnaire for the suppliers of the articles we sell but don't produce ourselves. The goal of this action was to create awareness of our membership with the FWF and to try if we can further improve our commitment towards the code of conduct. The results were poor in 2011 and also in 2012. It is still not satisfying enough and we need improvement in 2013.

In our organisation we see that improving (and already improved) labour conditions in the factories is becoming a normal aspect. Our quality controllers, instructors and also our customers that visit factories, together with us, are impressed to see the factories and their equipment as well as utilities. There is a positive attitude and everybody is working on continuously improving conditions. The final follow up for all action plans and audits remains the responsibility of P.Delporte and R.Kwaspen.

2. Sourcing strategy

2.1. Sourcing strategy & pricing

In our branch we have the possibility to work with a weekly planning. We plan our CMT jobs to our factories on a weekly base, as described under 'production cycle'. It is therefore that we do not use quotations per article but we can rely on a partnership based on calculated SAM times per item. The pricing of these SAM times are discussed annually as well as the capacity needed per quarter.

2.2. Organisation of the sourcing department

We only use the definition of sourcing when we buy ready-made articles. This is not our core activity. For the production of our own articles, we have a central planning department, which coordinates all production movements. Due to the long term relationships with our manufacturers we do not only provide CMT goods but also knowledge transfers. Our production sites are logistically controlled by this central planning department and on site controlled by our own people that are living abroad.

2.3. Production cycle

On a weekly base we provide CMT orders through our MRP system. These orders are divided over 4 regular production sites according to the agreed capacity. Our lead-time in production depends on the production site and can vary from 3 till 6 weeks.

2.4. Supplier relations

Selection of new factories is rare. We have (as described in our workplan) 6 factories that are producing almost all of our articles. Only if our production volume exceeds the regular capacity we make use of some other factories. These factories have been selected before and are a part of our annual manufacturers register. In 2012 we worked most of time with 6 factories.

2.5. Integration monitoring activities and sourcing decisions

Since we visit the production sites on a daily and /or weekly base we have a continuous monitoring system (our presence). Nevertheless, our international coordinator makes reports based on the outcome of previous audits. We do not use a preference system for the CMT orders.

3. Coherent system for monitoring and remediation

3.1. Factories Tunisia

In Tunisia we have worked in 2012 with several factories. 1 Factory is fully owned, 1 factory is preferred and fully rented, the others are well known and already for many years part of our supplier register. The outcome from audits are described as action points and shared through our mini platform. We visit 2 of these factories on a daily base and the others 3 times per week. The progress of the action plans is discussed by P.Delporte and by R.Kwaspen.

There have been no complaints to us, nor direct to the FWF. Due to the difficult political situation in Tunisia we noticed the workers are uncertain about the future and their work. We discussed this (a lot) with management of the factories and we keep it in mind during our visits and follow up of the action plans. We did not transfer any volume to another country.

3.2. Factories Macedonia

We have worked with 3 factories in Macedonia in 2012. These are well known and our relation with these factories is over 40 years. The factories are visited 4 times a week by our own people. P.Delporte and R.Kwaspen visit these factories about 3-4 times a year for the follow up of the action plans.

We agreed with the FWF that they will perform living wage audits in these factories in 2012. The outcome of these audits will be discussed during our visits in 2013.

There have been no complaints to us, we do not know if the FWF has received any from the workers of these factories.

3.3. External production

We do not have any monitoring activities for external production.

4. Complaints procedure

We did not receive any complaints in 2012. We discussed with the factories the possibility of setting up some grievance boxes but they don't like this system. Workers are not used to these boxes. We have to discuss this again in 2013.

5. Training and capacity building

5.1. Activities to inform staff members

Besides the responsible and appointed people there are no other people that need to be trained in order to understand the code of conduct. However we organised a training in 2012 in Goirle for our management and salesforce. In this training we discussed the way of working together with the FWF and our mutual activities in the factories.

To inform all colleagues about the actual status of our plans we use our internal magazine "de Brug" and our intranet. On our intranet, colleagues can read all previous audit reports, system audits, social plans and work plans.

5.2. Activities to inform agents

N.a.

5.3. Activities to inform manufacturers and workers

We did not perform any extra activities to inform workers or factories. There was no reason to do so. Should there be any reason to start training activities, we will perform them.

6. Transparency & communication

Van Puijenbroek Textiel uses their websites to inform clients and other people that are interested. Visualization of our membership to the FWF can be found on our catalog, some hangtags, website, company paper, etc. On the FWF website our annual reports are published.

7. Stakeholder Engagement

There have been no key topics/concerns raised through any stakeholder.

8. Corporate Social Responsibility

Van Puijenbroek Textiel is working on many fields of its corporate social responsibility. Not only we work with the FWF for our production sites in Tunisia and Macedonia, we also have our CSR policy at our headquarters in Goirle.
